

A PCA plot showing the first two principal components (PC1 and PC2) of a dataset. The x-axis is labeled PC1 and ranges from -1.0 to 0.6. The y-axis is unlabeled but ranges from -0.6 to 0.6. The data points are colored and grouped into four clusters, each with a corresponding centroid marked by a large 'X' symbol. The clusters are: orange (top left), green (top right), blue (bottom right), and purple (bottom left). The orange cluster is the largest and most spread out, while the green, blue, and purple clusters are more compact and well-separated from each other.

A PCA plot showing the relationship between PC1 (X-axis) and PC2 (Y-axis). The X-axis ranges from -1.25 to 0.50, and the Y-axis ranges from -1.50 to 0.25. The data points form a horseshoe curve, with a dense cluster of points in the upper right quadrant and a more dispersed cluster in the lower left quadrant. Several points are highlighted with large 'X' marks: a green 'X' at approximately (-0.4, 0.0), a blue 'X' at approximately (-0.1, 0.0), and a purple 'X' at approximately (0.0, 0.0). These 'X' marks likely represent centroids or specific points of interest within the data distribution.
